

Moray-Combo Mattress

Product Code: HER-COMBO-777

The Herida Moray-Combo™ represents the latest in hybrid mattress technology, developed by Herida Healthcare in collaboration with global partners. This innovative system is designed for patients at a Very High Risk of pressure injury, including those with Grade IV ulcers. It is specifically engineered with a primary focus on preventing heel damage and enhancing user comfort.

The Moray-Combo™ provides the core benefit of a hybrid, allowing a rapid transition from a high-risk static surface to a dynamic therapy system in seconds. It uniquely addresses how heel damage can be exacerbated by traditional alternating systems by combining a static "anti-shear wave management" device. This patent-pending design provides an innovative solution for healthcare professionals, even when the bed is profiled, ensuring robust heel protection and true patient comfort

KEY FEATURES

Safer Heel Solution: A leading, patent-pending design featuring a static "anti-shear wave management" device to protect vulnerable heels, even when the bed is profiled.

Very High Risk Capability: Clinically proven to be effective for patients at very high risk, suitable for managing existing pressure ulcers up to and including Grade IV.

Advanced Infection Control Cover: Features a fully welded, multi-stretch, vapour-permeable fabric that provides a robust barrier to fluid ingress while maintaining skin integrity.

Enclosed Hose Management Chamber: A unique, fully enclosed compartment inside the cover protects the hose from damage and removes potential infection risks from external exposure.

Hybrid Static-to-Dynamic System: High-quality foam-filled cells provide a very high-risk static surface that converts to an active, alternating therapy mode simply by adding a pump.

High Weight Capacity: Robustly designed with a CME foam surround and base to support patients with advisory weight limits up to 40 stone / 254 kgs.

Rapid CPR Functionality: Simply detach the mattress from the pump to commence CPR. No frantic searching for a CPR valve is required, saving critical time in an emergency.

Versatile Pump Options: The mattress system is compatible with both digital and analogue pumps, offering flexibility to suit different clinical environments, budgets, and procedural needs.

SPECIFICATIONS

- **Length:** 198 cm
- **Width:** 88 cm
- **Depth:** 16 cm (sloping to 9 cm at Heel end)
- **Mattress Weight:** 9 kgs
- **Cell Alternating Cycle:** 11.5 minutes
- **Noise Output:** Ultra-low - 45db
- **Risk Factor:** Very High Risk
- **Advisory Weight Limit:** 40 stone / 254 kgs
